Semester	T.E. Semester V - Computer Engineering
Subject	IMR
Subject In-charge	Prof. Aniket Kundu

Prev Image	

Exp. No.2

New Image	

Student Name	Pratiksha Mujmule
Roll Number	24102A0024
Grade and Subject Teacher's Signature	

Changes Made	1. Structural Flow (5 Steps vs. 6 Steps) • New Image: Consolidates the process into 5 steps. Step 3 is "LASER IRRADIATION & SHIELDING," combining the laser action and the shielding function into a single phase with a detailed explanatory callout. • Old Image: Divides the process into 6 steps. Step 3 is strictly "LASER IRRADIATION," and Step 4 is a separate "SHIELDING & QUENCH CONTROL" step. 2. Text Quality and Spelling (Clean Text vs. AI Artifacts) The most significant difference is the correction of numerous spelling errors, typos, and AIgenerated "gibberish" text present in the old image. Step Descriptions: • Old: Contains mangled text like "dispensed ovar are surface to seseto to protective/reactive tlype" (Step 2) and "managing the reaction atmosphere and controlling the renee microstructure" (Step 4). • New: Uses clear, grammatically correct English (e.g., "dispensed over the surface to create a protective/reactive layer"). Automation & Control: • Old: Features misspelled bullets like "Rebotie handliog," "Laser eolt diapening," and "Cloced foep reptors." It also uses a brief subtitle "Full process monitoring." • New: Corrects all bullets to standard English (e.g., "Robotic handling," "Laser power control") and includes a clearer descriptive subtitle: "(Operates as a closed-loop feedback system overseeing the entire 5-step pipeline)." Process Benefits: • Old: Lists misspelled benefits like "receetability," "osidation," "Enrirommoialy cofer (eolt is rooesble)," and repeats "Improved quality quality." • New: Corrects these to "High precision & repeatability," "Reduced oxidation & defects," "Improved surface quality," and "Environmentally safer (molten salt is recyclable and reusable)." Typical Applications: • Old: Contains typos like "kardening," "oliaying," and "Teol & dis manufacturing." • New: Corrected to "Surface hardening," "Cladding & alloying," and "Tool & die manufacturing." Outcomes & Byproducts: • Old: The title is "OUTCOMES & BYPRODUCTS FROM THIS PROCESS". The descriptions contain heavy artifacts like "Euhensed Surface Layer (barobined / wedified figon)" and "Recyclsted Malten Salt (recevored and motoe)."

	• New: The title is simply "OUTCOMES & BYPRODUCTS". The text is fully corrected, offering clear definitions like "Enhanced Surface Layer: Hardened / modified layer" and "Recycled Molten Salt: Recovered and reused for future cycles." Summary: • Old: Contains minor typos ("automsted precess", "surfeca", "lacer", "heet", "Automotion", "efficienay"). New: All typos in the summary block are fixed.
